----- ## EDUCATION University at Albany, State University of New York — Albany, NY Bachelor of Science in Electrical and Computer Engineering (ECE) | Expected May 2028 - Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming (OOP), Signal Processing, Circuit Analysis, Digital Logic Design, Embedded Systems. ----- ## TECHNICAL SKILLS - Programming Languages: Python, C++, Java, MATLAB, TypeScript/JavaScript, C - Core Concepts: Data Structures & Algorithms, Systems Integration, Multithreading, Low-Latency Processing, Object-Oriented Design - Tools & Hardware: Git, GitHub, REST APIs, Linux/Unix, Scopy Signal Analysis, Oscilloscopes, Function Generators, Custom Hardware Architecture - Testing & Workflows: Unit Testing, Debugging, API Workflows, Performance Optimization, Data Validation ----- ## TECHNICAL EXPERIENCE Handshake AI — Remote AI Technical Trainer / Multimodal Data Evaluator | June 2026 – Present - Conducted rigorous evaluation and validation of generative AI models executing complex reference-to-image and video workflows. - Applied systematic debugging and error-analysis frameworks to identify edge-case failures, latency bottlenecks, and output discrepancies. - Provided structured feedback on algorithm performance to optimize prompt execution pipelines and model reliability. ----- ## PROJECTS & LAB EXPERIENCE Hardware-Software Signal Processing & Analysis Pipeline Lead Developer & Hardware Specialist | Spring 2026 - Designed and executed real-time signal analysis tests using Scopy software, oscilloscopes, and function generators to analyze low-latency analog and digital signal flow. - Written MATLAB scripts to automate data collection, perform frequency domain filtering, and validate signal integrity under dynamic loads. - Optimized data export and software integration pipelines to systematically reduce noise and improve measurement accuracy across complex test environments. Custom Systems & Gateway Integration Systems Developer | July 2026 - Configured local backend API gateways using OpenClaw and Ollama to interface local LLM models with external messaging APIs like Discord. - Diagnosed and resolved low-level network socket and port connectivity issues, optimizing client-server communication pipelines for reliable execution. - Utilized Git for version control, managing modular application code and token authorization protocols. -----

Current Projects

Word Ladder Game Engine (ECE 240 / ECE 332 Semester Project)

- **Overview:** Developing a modular, multi-milestone word ladder puzzle solver and human-playable game in C as part of the Fall 2026 ECE curriculum.
- **Core Architecture & Features:**
 - Implemented dictionary validation checking (isInDictionary) and single-letter transition verification (isOneLetterDifferent) adhering to strict design constraints (zero global variables, explicit parameter passing).
 - Designed a robust game loop handling user prompt flows, 2D array ladder storage, duplicate-word termination checks, and comprehensive error handling for non-alphabetic inputs, incorrect lengths, and invalid dictionary words.
- **Development Tools:** Visual Studio, C, Brightspace Dictionary Data (5,000+ five-letter

words).

Interactive 3D Personal Portfolio Website

- **Overview:** Designed and deployed a responsive, modern personal portfolio showcasing engineering experience, projects, and technical skills.
- **Technologies:** Framer, Spline (3D interactive elements), JavaScript, HTML/CSS.

Local AI Model Gateway & API Integration

- **Overview:** Built a lightweight local pipeline integrating open-weights language models with external messaging channels.
- **Technologies:** Ollama, OpenClaw CLI, Python, REST APIs, Git.

----- **## KEY COMPETENCIES & LEADERSHIP** - Technical Problem Solving: Proven ability to isolate root causes in complex software and hardware systems under tight lab/production deadlines. - Collaboration & Communication: Effective at translating technical concepts into clear documentation and collaborating with cross-functional teams.
